

Mouthpiece and ligature

To assemble the mouthpiece align the mouthpiece, barrel and top joint so that the reed is in a direct line with the back thumb hole. The ligature should be positioned about 4mm below the beaked section of the mouthpiece.

Barrel

Top joint

Bottom joint

To assemble the bottom joint, first fit the bell then align the bottom joint with the top joint so that the holes form a straight line. Be careful not to damage the bridge mechanism that links the two joints.
